

Microsoft Touch Wins

Get the perfect
Windows 8.1
device

A touch above the rest

There's no doubting it, the world has become more mobile. Both enterprise and consumer users want to be able to share, connect and entertain no matter where they are. The solution is a Windows 8.1 device. Windows 8.1 is available both out-of-the-box and as a free update to those running Windows 8. Windows 8.1 has a modern interface that makes work smoother on both touch and non-touchscreen devices. The transition to this interface has rapidly changed the PC Systems market for the better.

Touch Wins

A Windows 8.1 multi-touch device is slick and intuitive; users can get productivity at just the flick of a finger or a subtle pinch in or out gesture. Editing pictures, browsing emails or surfing the web is seamless. The touchscreen market has grown 10 times faster than other displays over the last year. Touch gives users further freedom to be more interactive with their device.

Windows 8.1 is evolving both the PC Systems and touchscreen market for business and at home – with these Microsoft recommended devices you can be sure that you can recommend the perfect device to your client.
